

# RICKY LAMBERT

Junior Full-Stack Developer & Blockchain Student

`ricky-dev.co.uk` ↗  
`ricky-dev@outlook.com` @  
`github.com/rickylambert87` </>  
`United Kingdom`

## // PROFILE

Junior developer building strong foundations in web development, blockchain, and AI-assisted development. Skilled at using AI tools to streamline workflows, support learning, generate code snippets, and optimize project outcomes. Focused on hands-on projects that deepen practical skills and demonstrate adaptability to modern industry practices.

## // SKILLS & TOOLS

### Frontend

`Next.js`, `React`, `Tailwind CSS`, `shadcn/ui`, `TypeScript` basics

### Backend

`Node.js`, `Express`, `REST APIs`, `MongoDB`

### Blockchain

`Solidity` basics, `Hardhat`, `Ethers.js`, `ERC-20` / `ERC-721` fundamentals

### AI & Automation

Proficient in leveraging AI for code generation, debugging, and project planning. Experience using AI to optimize development workflows and assist in problem-solving.

### Tooling

`VS Code`, `Warp/Zsh`, `Git/GitHub`, `Raycast` workflows, AI assistants

## // EDUCATION

### Self-Directed Study

`Full-Stack`, `Blockchain` & `AI Support`

`Documentation-driven learning`, `project-based progression`, `hands-on AI-assisted development`, `real-world understanding focus`.

## // PROJECTS

### Inventory Admin Dashboard

`Learning Project` – `MERN`

*Built as a practical exploration of full-stack concepts, using AI to assist in code planning and debugging.*

Implemented `CRUD` operations using `Node.js` + `Express`

Created responsive `React` UI with `Tailwind CSS`

Added simple authentication & protected routes

Leveraged AI for structuring components and managing state logically

### DeFi Learning Sandbox

`Web3` / `Solidity`

*A personal playground for understanding blockchain fundamentals and experimenting with AI-assisted coding tasks.*

Wrote & deployed simple `ERC-20` contracts to testnets

Used `Hardhat` for testing & deployment scripts

Built small `React` UIs connected with `Ethers.js`

Used AI tools to optimize contract logic and frontend integration
